

PARITY

equality in status/opportunity

Ananya Karri

Project Idea: NLP for Detecting & Solving Social Inequalities in Bengaluru

Focus: Water, Housing, Education,
Healthcare

Collaboration: Companies + Citizens +
Government

The Problem :

Social inequality = unequal access to resources & opportunities

In Bengaluru:

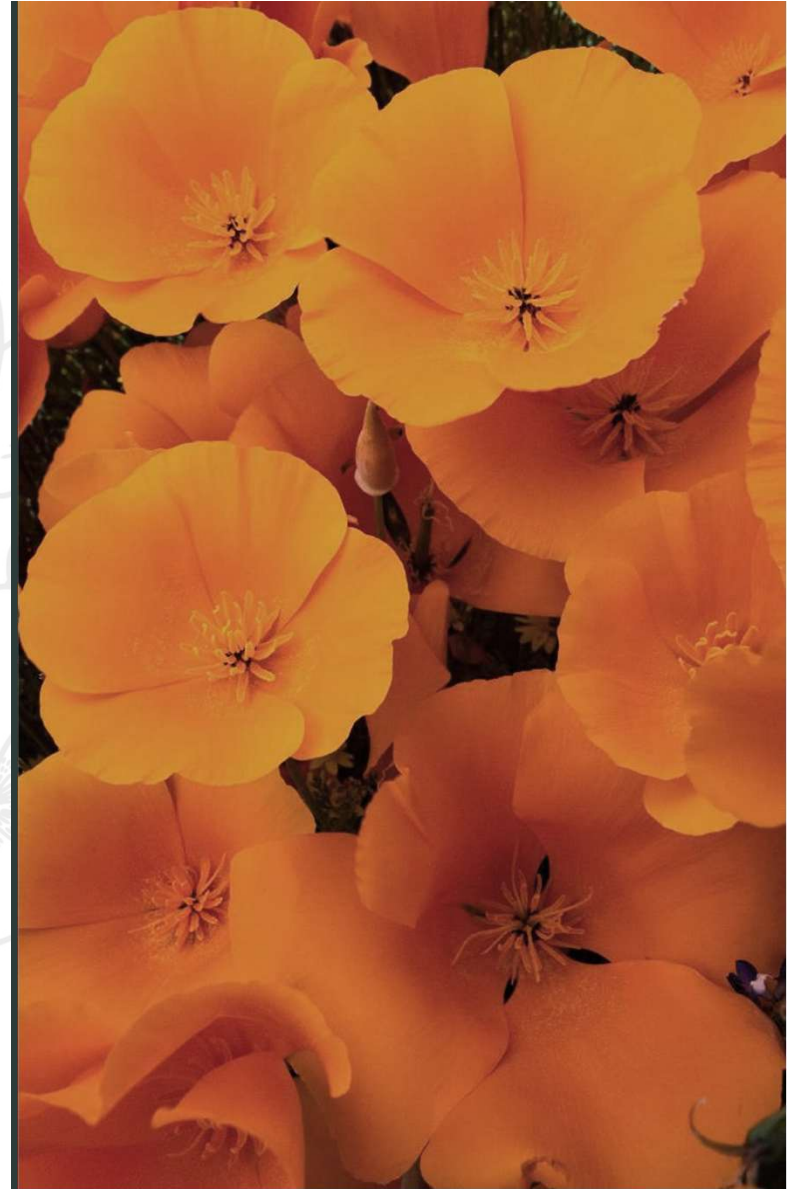

Slums lack water & sanitation

Govt schools face teacher shortages

Poor families struggle with healthcare access

Citizen complaints are scattered & ignored

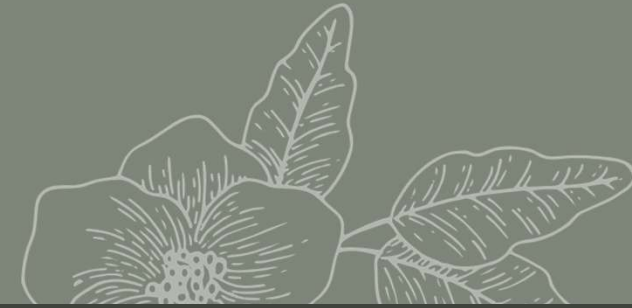

Companies want CSR impact but lack clear data

Our Solution (NLP System)

- **Citizen Voice Aggregator:** Collects complaints from WhatsApp, Twitter, helplines, surveys
- **Classification:** Tags issues into *Water, Housing, Education, Healthcare*
- **Sentiment & Urgency:** Detects frustration levels for prioritization
- **Entity Extraction:** Identifies ward/locality names

Dashboard Features

Quarterly Top Problems:

Shows the top 2 inequality issues each quarter

Example: Q1 → *Water shortages in slums + Lack of teachers in govt schools*

Area Mapping:

Problems displayed ward-wise (Koramangala, Whitefield, Bellandur, etc.)

Heatmap view for policymakers & companies

Company Collaboration Layer

Companies access dashboard → see top problems + affected areas

Align CSR projects with real needs:

Tech firms → sponsor digital labs in govt schools

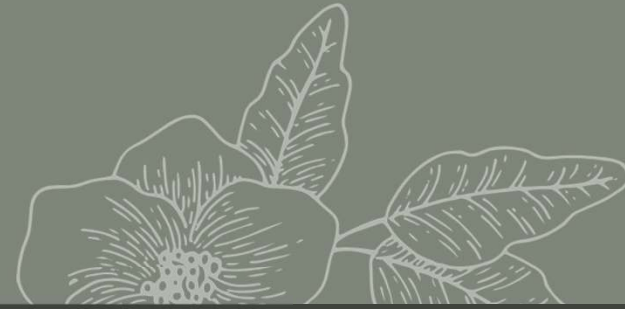

Real estate firms → fund rainwater harvesting in slums

Healthcare firms → run mobile health camps

NLP generates **impact reports**:

“Your CSR project reduced water complaints in Ward 45 by 40% this quarter.”

Benefits

- For Citizens: Voices heard, problems solved faster
- For Government: Clear data-driven insights for policy
- For Companies:
 - Public Relations boost
 - Goodwill in communities
 - Market recognition through CSR impact

Thank you
